

Keep an eye on your business with
hardware-free cloud video surveillance.

Cloud video surveillance made simple

FOR BUSINESSES AND RESELLERS

Camcloud is a hardware-free
cloud video surveillance platform,
perfect for businesses.

**Camcloud has all the bases covered, delivering a
modern platform that outperforms other cloud video
surveillance solutions.**

CAMCLOUD DIRECT

Connect your cameras
directly to the cloud for fast
and fail-safe surveillance.

PLUG & PLAY

The broadest camera
support on the market, with
0 configuration required

QUICK CONFIG

Get up & running in minutes. Detect
cameras, ensure the latest firmware,
install software, and fully configure.

COVERING ALL THE BASES FOR YOUR CLOUD VIDEO SURVEILLANCE NEEDS.

- Restaurants & Retailers
- Multi-Location Enterprises
- Partner Solutions

CLOUD STORAGE

Store your critical surveillance footage safely off-site in the cloud for up to 90 days. No more complex on-site hardware and all your media, from all your cameras will be stored in a single, secure location. Access and manage your private cloud archive through our beautifully designed multi-camera Timeline on our web and mobile apps.

OPEN DEVICE SUPPORT

Use the cameras you want with Camcloud. Our platform is designed to work with the largest number of cameras possible, including leading brands such as Hanwha Techwin (Samsung), Amcrest, Axis, Hikvision, VIVOTEK and more. The service also supports the use of numerous local storage and encoder options, including SD cards, DVR/NVRs and encoders.

MULTI-SITE

Easily manage a large number of cameras, users and physical locations. Camcloud's multi-user feature allows for unlimited users on your account while restricting their account access and what cameras they can view, with limited account privileges. Since the service is cloud-based, you can connect cameras from unlimited number of physical locations, all while organizing cameras through our intuitive label feature.

EDGE STORAGE

Seamlessly integrate various local storage options, including SD card and Network Attached Storage (NAS), into your primary cloud storage solution. This ensures if your camera or site loses internet connectivity then events will still be captured locally and can be reviewed within your cloud apps.

CAMERA HEALTH CHECKS

Let Camcloud tell you when there's a problem with one of your cameras. If our cloud servers can't connect to your camera, you'll receive an alert that something could be wrong. Take advantage of our advanced cloud notification system that will work across all connected cameras. Camera Health Check and motion alerts are centrally managed and sent to your mobile device or email.
